What Classifies as "Specialist Care"?

Standard care usually covers companionship, meal preparation, mobility assistance, and basic personal hygiene. A care package will be upgraded to the **Specialist** pricing tier if the client requires support with:

- **Advanced Neurological Conditions:** Parkinson’s disease, Multiple Sclerosis (MS), or Motor Neurone Disease (MND) requiring careful moving, handling, and monitoring.
- **Complex Dementia Care:** Advanced stages of dementia that result in challenging behaviours, severe disorientation, or a high risk of wandering, requiring carers with specialised de-escalation and dementia training.
- **Clinical / Nurse-Led Interventions:** Tasks that require specific medical competencies, such as PEG (tube) feeding, stoma or catheter management, bowel management, or monitoring oxygen therapy.
- **Palliative / End-of-Life Care:** Specialised support focused on maximising comfort, managing pain symptoms alongside district nurses, and providing emotional support for the family during the final stages of a terminal illness.

Because specialist care is highly individualised, the final rate will depend entirely on the clinical assessment. If your loved one has specific medical needs, it is highly recommended that Peach Care Services (or any agency you are considering) conduct a full assessment to outline exactly which competencies the assigned carers will need.
